NEWS RELEASE

ECHO ENERGY COMPLETES ABOVE AVERAGE NATURAL GAS FLOW TESTING

London, ON – September 5, 2007 - Echo Energy Canada Inc (EEI: TSXV-Tier 1) is pleased to announce successful flow testing of another Thorold/Grimsby well that was drilled earlier this year. The well is located close to the company’s existing gathering system in Bayham Township in southwestern Ontario. In addition to this successful well, the company is continuing to drill additional wells targeting the Thorold/Grimsby zone under the company’s leased acreage.

ABOVE AVERAGE TESTING

Echo 48: Bayham 7-1-I penetrated a very good quality Thorold gas zone that was flow tested on July 11, 2007. Based on the interpretation by (JMPEL) Jim McIntosh Petroleum Engineering Ltd., Echo’s consulting petroleum engineer, an initial flow potential for this well into pipeline of up to seventy five thousand cubic feet per day (75 Mcfd) can be expected. This flow rate will augment the flow rate through Echo’s system. The “average” producing rate from Thorold/Grimsby gas wells in the area is 20 to 100 Mcfd, so Echo 48 is in the upper range of flow rate expectations. This well will be tied into the Echo system as soon as possible.
